Cover Letter
Dear Recruitment Team

I am writing to express my interest in opportunities within your organisation. I am currently completing my Honours in Informatics at Stellenbosch University, with a Bachelor of Commerce in Information Systems as my undergraduate foundation. I bring with me a strong academic record, hands-on technical skills, and a passion for applying technology to solve real-world challenges.

Recently, I had the privilege of representing Stellenbosch University at an international AI Hackathon hosted at TU Dresden in collaboration with the Otto Group. In this high-pressure environment, I focused on backend prompt engineering using Python and Google's Gemini models on Vertex AI, contributing to the development of an AI-powered customer support tool. This experience sharpened my problem-solving abilities, strengthened my collaboration skills, and deepened my interest in AI-driven solutions.

Throughout my studies, I've worked with tools like Python, JavaScript, ReactJS, SQL, Pocketbase, Figma, and RStudio etc, and served as a teaching assistant, which has helped me balance technical precision with clear communication.

I would welcome the opportunity to grow within a team that values innovation, learning, and impact. Thank you for considering my application. I would be happy to provide any further information or supporting documents.

Kind regards,
Camila Nkhama
